Appzillon Server

| Enhancement | **Updates Made to The Appzillon Server** |

Below are the updates made to the Appzillon server to enhance security and to tighten the encryption.

Web:

Version Updates,

- Updated spring to version 5.3.16
- Updated jersey version to 2.35

The vulnerable jars are updated.

| Enhancement | **Added a Report** |

- A report is added as a part of the OpenShift and EKS deployment using NFS servers which act as a storage component.
- A pipeline is added to deploy fluentd as a demonset to login to the EKS deployment.

IDE

No updates to this section

Infra

| Enhancement | **Enhancement on CSS** |

The latest version of Alertify CSS is added to all the themes in the application.

This enhancement is made as the previous library had a vulnerability.

| Enhancement | **Platform Level Changes** |

As a part of this release, platform-level changes are made to alertifyJS updates.

Below are the changes:

```
appzillon.js => dispMsgCB(), dispMsg()
Added folder under Infra => styles:
alertify - (alertify.css, bootstrap.css, default.css, semantic.css)
```
